Project Performance Testing

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The housing dataset was successfully uploaded and rendered in Tableau Public. All dataset fields, includ Status, Overall Grade, were loaded correctly and made available for further analysis. 2.	Data Preprocessing	Removed null values, verified data types, created calculated fields, grouped Zipcode (1-9), validated ren

3.	**Utilization of Filters**	**Filters used:** Aggregation functions: `SUM(Usage)` was primarily used for total load mappings, and `AVG(Usage)` was applied
4.	Calculation fields Used	In this Visualization (Total Orders) Use Create Calculation field and other visualization normal calculation fields **Logic / Syntax:** Mapped via custom integer parameters linked with rank/index functions (`INDEX()`) to dynamic **Purpose:** Solves Tableau's order of operations conflict, allowing the dashboard to dynamically rank the top or b
5.	Dashboard design	All Visualization in use Dashboard Design (Food Ordering & Customer Trends) *f.g.->Dashboard 1*
