

Restaurant Manager - Analytics Dashboard Journey

Date	14 July 2026
Project Name	Food Ordering Behaviour and Customer Trends
Team Member	Bhoomi Jain
Website / Tech	Flask web application with an embedded Tableau Dashboard and Tableau Story
Repository	Food-Ordering-Analytics-Dashboard

Project Description

The project analyzes approximately 50,000 food ordering records using Tableau Public. It delivers business insights through an interactive Tableau Dashboard and Tableau Story, both embedded in a Flask-based web application.

Dashboard Focus Areas: KPI Dashboard, Cuisine Demand Analysis, Revenue Analysis, Customer Rating Analysis, Delivery Time Analysis, Meal Type Analysis, Restaurant Segment Analysis, Customer Age Group Analysis, City-wise Order Analysis, and Interactive Filters.

Customer Persona

Primary User: Restaurant Manager (Age: 35-45 years)
Experience: Manages day-to-day restaurant operations and overall business performance.

- Goals:**
 - Understand ordering behaviour.
 - Monitor revenue and KPIs.
 - Identify popular cuisines.
 - Optimize performance & satisfaction.
- Challenges:**
 - Large volumes of raw data.
 - Manual trend identification.
 - Limited visibility into choices.
 - Time-consuming reporting.

Customer Journey Map

Dimension	Stage 1: Access Dashboard	Stage 2: Review KPIs	Stage 3: Analyze Behaviour	Stage 4: Review Story	Stage 5: Make Decisions
Experience Steps	Opens the Flask app and loads the Tableau dashboard.	Scans KPI cards for revenue, orders, ratings, and delivery.	Filters by cuisine, meal type, age group, and city.	Walks through the guided Tableau story for insights.	Applies insights to menu, marketing, and operations decisions.
Interactions					

Dimension	Stage 1: Access Dashboard	Stage 2: Review KPIs	Stage 3: Analyze Behaviour	Stage 4: Review Story	Stage 5: Make Decisions
	Flask dashboard homepage and Tableau embed.	KPI summary cards and Tableau dashboard.	Interactive filters and drill-down charts.	Guided Tableau story, slide by slide.	Team meetings and exported reports.
Goals & Motivations	Help me get a fast performance snapshot.	Help me understand what the numbers mean.	Help me find patterns worth acting on.	Help me see the big picture, not just charts.	Help me act with confidence.
Positive Moments	Dashboard loads fast with a clean layout.	KPI cards make performance easy to grasp.	Filters reveal patterns not noticed before.	Story ties the numbers into a clear narrative.	Feels confident the decision is data-backed.
Negative Moments	Unsure where to start among many sections.	Some KPIs lack context for good or bad.	Too many filter combinations feel overwhelming.	Story can feel stale if not refreshed often.	Hesitates to act without a second opinion.
Areas of Opportunity	Add a short "start here" onboarding tour.	Add benchmark thresholds and colour-coded KPIs.	Suggest smart default filters from recent trends.	Refresh the story weekly with new insights.	Add exportable, shareable action summaries.

Prepared as part of the Food Ordering Behaviour and Customer Trends capstone project.
