

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	14 July 2026
Project Name	Food Ordering Behaviour and Customer Trends
Team Member	Bhoomi Jain
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Dashboard Visualization	- Display interactive Tableau dashboard with key metrics - Display KPI summary cards for total orders, revenue, and average rating
FR-2	Cuisine Demand Analysis	- Analyze cuisine-wise order demand - Compare cuisine popularity across different cities
FR-3	Revenue Analysis	- Display revenue distribution by meal type - Show revenue contribution by cuisine and city
FR-4	Customer Rating Analysis	- Analyze customer ratings by meal type and cuisine - Compare satisfaction across restaurant segments
FR-5	Delivery Time Analysis	- Display average delivery time trends - Compare delivery performance across cities and restaurant segments
FR-6	City-wise Order Analysis	- Analyze order volume by city - Analyze order distribution across restaurant segments
FR-7	Interactive Filters	- Apply filters by city, cuisine, and meal type - Enable drill-down into individual visualizations
FR-8	Tableau Story	- Display a guided analytical story of ordering trends - Present key business insights in a narrative format
FR-9	Flask Website	- Embed the Tableau dashboard within the Flask website - Embed the Tableau story within the Flask website

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-10	Business Reporting	• Present summarized business insights for stakeholders • Support data-driven decision making for restaurant owners and managers

Non-functional Requirements

Following are the non-functional requirements of the proposed solution:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard should be easy to use, with clear navigation and intuitive interactive visualizations for business users.
NFR-2	Security	The application should securely present analytics through the Flask website without exposing raw or sensitive customer data.
NFR-3	Reliability	The dashboard should consistently produce accurate and dependable analytical results from the underlying order data.
NFR-4	Performance	Dashboard pages should load efficiently, and visualizations and filters should respond smoothly to user interaction.
NFR-5	Availability	The Tableau dashboard and Flask website should remain accessible to users whenever business insights are needed.
NFR-6	Scalability	The solution should be able to accommodate larger datasets and additional dashboards as the project grows in future.
