Define the Problem Statements

Project: Food Ordering Behaviour and Customer Trends

PROBLEM STATEMENT 1 (PS-1)

I am: Restaurant Manager

I'm trying to: Understand customer ordering behaviour, identify popular cuisines and monitor revenue trends across different cities.

But: The available data is scattered across multiple records and difficult to interpret manually.

Because: There is no centralized dashboard to summarize customer behaviour, delivery performance and sales insights.

Which makes me feel: Frustrated because important business decisions become slower and less data-driven.

PROBLEM STATEMENT 2 (PS-2)

I am: Business Analyst

I'm trying to: Analyze customer preferences, delivery performance and meal-wise revenue using interactive visualizations.

But: Raw datasets contain thousands of records that are difficult to analyze without proper visualization tools.

Because: Manual analysis is time-consuming and meaningful trends are hard to identify.

Which makes me feel: Inefficient because valuable insights may be overlooked.

Problem to Solution Flow

**Raw Dataset → Data Cleaning → Tableau Dashboard & Story → Business Insights →
Better Decision Making**
